Massively Multilingual Speech TTS

Mazen Alamri
Mohammed Alageel

Model Overview

MMS-TTS is a self supervised model which is trained on unlabeled data over 1400 languages, it is a text-to-speech model that supports many languages, it is made of a conditional variational autoencoder (VAE) comprised of a posterior encoder, decoder, and conditional prior.

Applications

- Accessibility
- Navigation Systems
- Virtual Assistants
- Language Learning
- Many more

Training Data

The pre-training data covers about 491K hours in 1,406 languages. This data is drawn from six training corpora with different characteristics.

- MMS-lab-U: 1,362 languages comprising 55K hours.
- Multilingual Librispeech (MLS): 8 European languages of read books totaling 50K hours
- CommonVoice (CV): 89 languages totaling 8.8 hours of read Wikipedia text
- VoxLingua-107 (VL): 107 languages totaling 5.3K hours of YouTube content
- BABEL (BBL): 17 African and Asian languages totaling about 1K hours of conversational telephone data
- VoxPopuli (VP): 371K hours of unlabeled speech data in 23 languages derived from European Parliament event recordings

Conclusion

- MMS-TTS is a powerful multilingual speech model for using Text-To-Speech in many languages, trained with huge amounts of data
- We can use pre-trained models to make relatively accurate models in little time
